

Devastating consequences of the opioid epidemic include increases in opioid misuse and related overdoses, as well as the rising incidence of newborns experiencing withdrawal syndrome due to opioid misuse during pregnancy. Research is a critical part of the solution in resolving this public health crisis.

Opioids are a class of drugs that include **prescription pain relievers, heroin and synthetic opioids**, such as fentanyl.

Opioid misuse and addiction is a serious public health crisis that affects social and economic welfare.

Every day, 136 Americans die after overdosing on opioids.

In 2019, **more than 50,000 Americans died** as a result of an opioid overdose.

~ 21 to 29 percent of patients who are prescribed pain relievers for chronic pain misuse them.

~ 8 to 12% of patients who misuse pain relievers develop an opioid use disorder.

~\$78.5 billion per year is spent addressing U.S. prescription opioid misuse, including the costs of healthcare, lost productivity, addiction treatment, and the criminal justice response.

NIH scientists & researchers are working to:

- **Develop a safe, effective medication** for chronic pain that has the effects of opioids without the high risk of addiction and misuse
- **Develop a vaccine** to protect against opioid misuse
- **Treat people with specific opioid use disorders** with buprenorphine injections
- **Improve overdose prevention and reversal interventions** to save lives and support recovery

The NIH HEAL Initiative funds research to find scientific solutions to the national opioid public health crisis.

As of August 2021, NIH has funded **\$1.5 billion** in research to tackle the national opioid overdose crisis through the **Helping to End Addiction Long-term (HEAL) Initiative**. The HEAL initiative supports research aimed at improving treatments for chronic pain, opioid use prevention and overdose, and sustainable recovery

Reliable increases in NIH funding can help prevent and treat opioid use disorders, find safer ways to manage chronic pain, and reduce future healthcare spending.
